

REMARKS

Claims 1-15 remain pending. Claims 1- 15 were objected to based on certain informalities.

Claim 1 has been amended to address certain informalities. The language "impulse response function" has been changed to "impulse response" to be consistent with the terms as used throughout the specification. Similarly, "step response function" has been changed to "step function response" to be consistent with the terms as used throughout the specification.

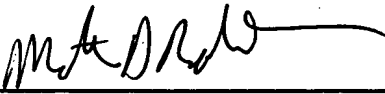

Claims 14 and 15, do not need to be amended as they currently include the term "impulse response and step function response," which is now consistent with amended claim 1, as well as usage throughout the specification.

The drawings have been amended as requested by the Examiner. Formal replacements have been provided for all sheets.

Applicant respectfully requests that all pending claims be allowed and this application passed on to issuance.

Respectfully submitted,

Xiaofen Chen
